DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The use of alternative expression "or" render the claims indefinite because they present uncertainty or ambiguity with respect to the question of scope or clarity of the claims.

The phrase "related" was held to be indefinite because the specification lacked some standard for measuring the degree intended.

2. The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Rogers (5,610,499).

Rogers discloses a multi-battery fuel saving and emission reduction system for automotive vehicles in figures 1,2 and 7.

Art Unit: 2838

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

6. Claims 1-18 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by Watts (6,160,389).

Watts discloses a battery charger with low heat dissipation in figures 3.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Petrillo discloses an electrical charge control apparatus and method for photovoltaic energy conversion systems. Freiman et al. disclose a battery pack with single charge-inhibit/regulator transistor.
